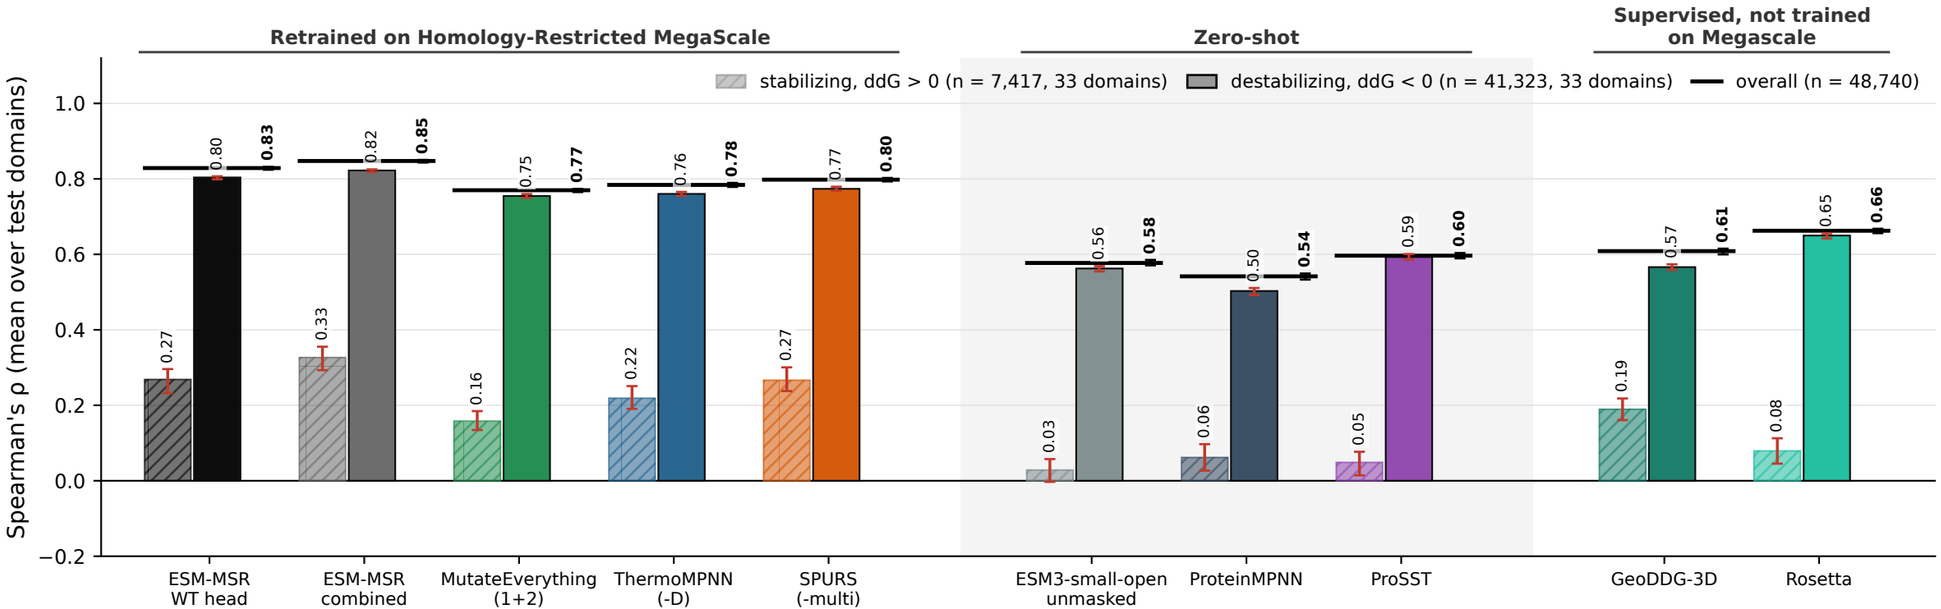
Homology-Restricted MegaScale test, all variants (singles and doubles): Spearman ρ of stabilizing against destabilizing variants (domains with at least 10 in the subset); 95% intervals from resampling mutations within each domain



MutateEverything(1+2), ThermoMPNN(-D), SPURS(-multi): singles are scored by the first model, doubles by the second (stage 1 / stage 2, ThermoMPNN / ThermoMPNN-D, SPURS / SPURS multi).
GeoDDG-3D: the better of GeoDDG-3D and DDGemb by mean per-library singles ρ; trained on S8754 (ProThermDB + ThermoMutDB), not on Megascale.
