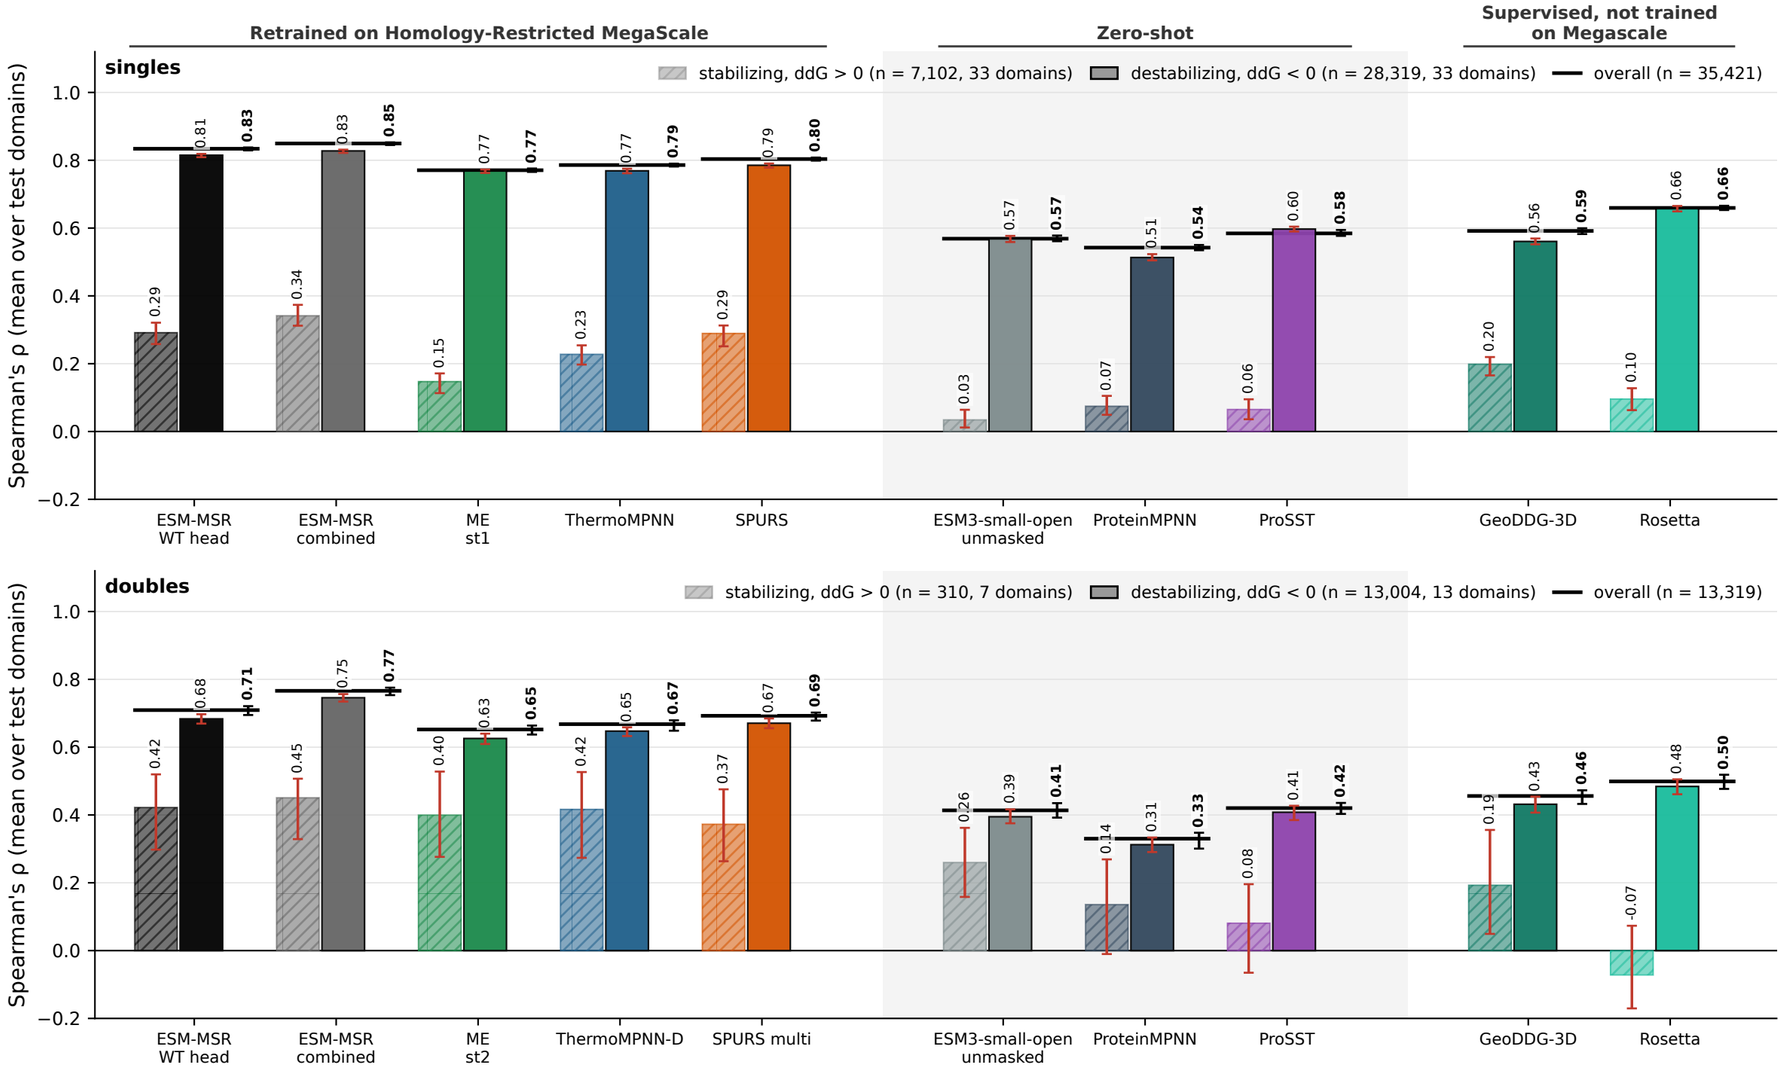
Homology-Restricted MegaScale test, Spearman ρ of stabilizing against destabilizing variants (domains with at least 10 in the subset); each panel scores its subset with the model that fits it; 95% intervals from resampling mutations within each domain



GeoDDG-3D: the better of GeoDDG-3D and DDGemb by mean per-library singles ρ; trained on S8754 (ProThermDB + ThermoMutDB), not on Megascale.
