
* The 23 Stability assays whose proteins the retrained models trained on (Tsuboyama libraries inside the capped train split, shared by ESM-MSR, ME, ThermoMPNN and SPURS) are removed from every model: Stability* keeps 43 of 66, PG avg* averages the five category means over the remaining assays, DMS mean* is over 190 of 213. The unfiltered values (the documented table) are in pg_summary_all213.csv.
