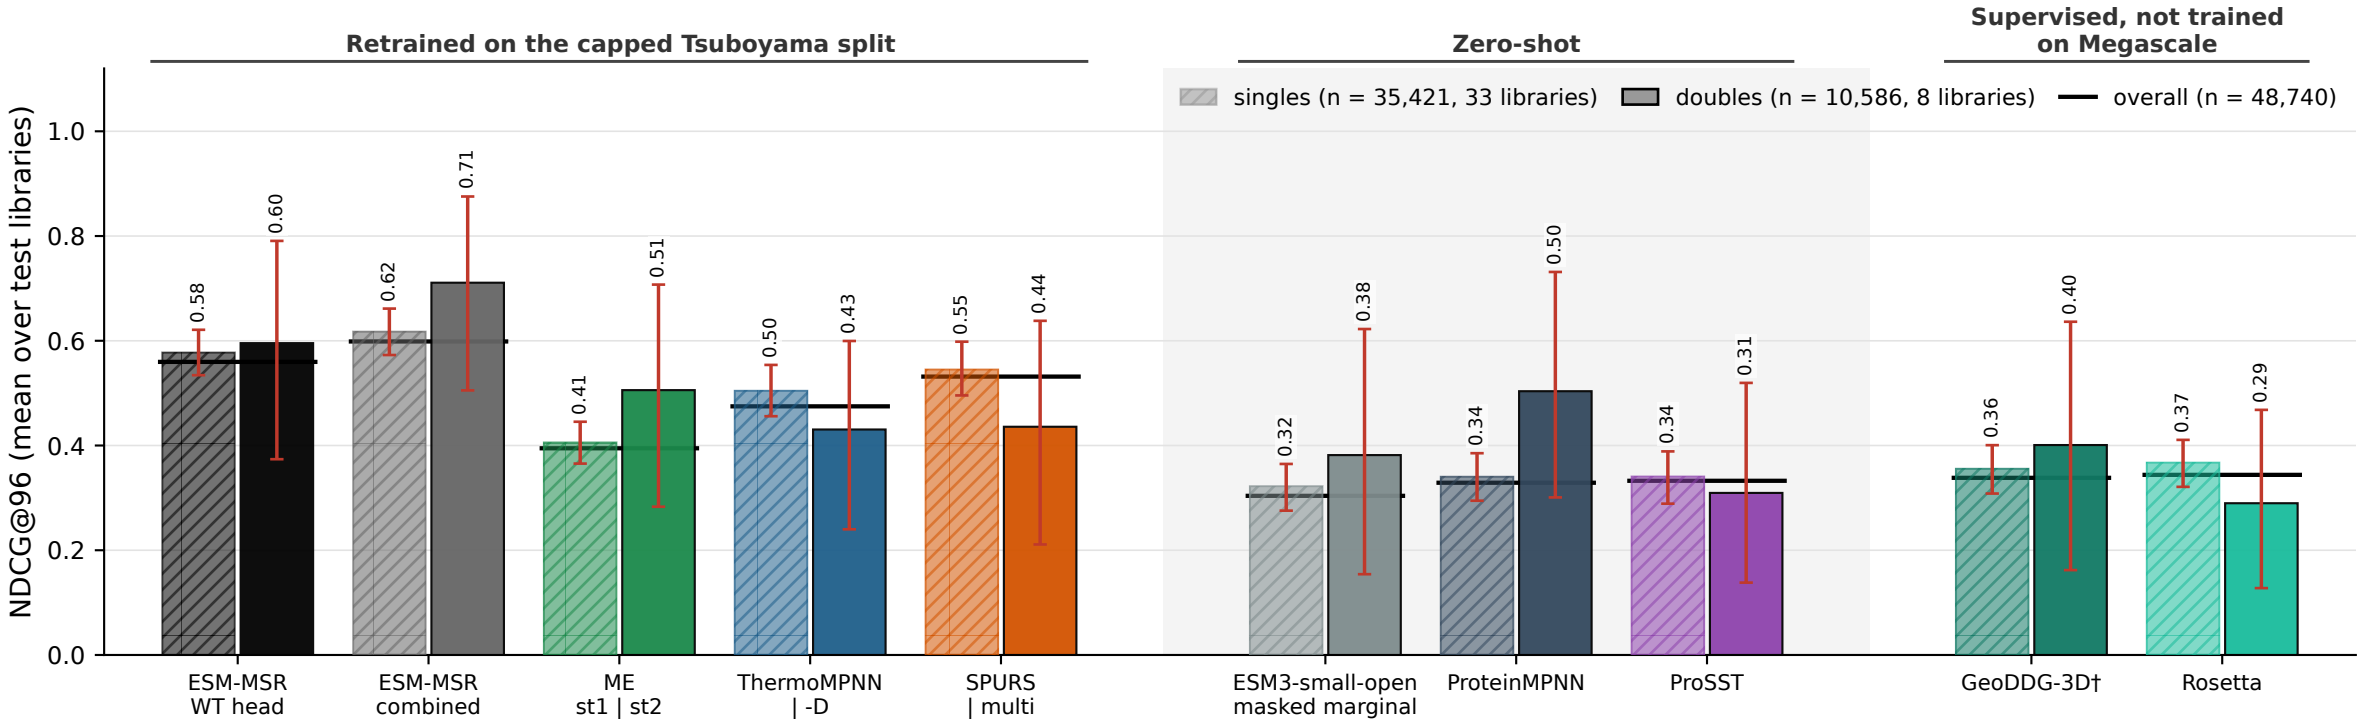
Capped Tsuboyama test, NDCG@96 per library, 95% intervals from resampling libraries (doubles: the libraries with a stabilizing double)



X | Y: singles scored by X, doubles by Y.
† trained on S8754 (ProThermDB + ThermoMutDB), not on Megascale; chosen over DDGemb by mean per-library singles ρ. ESM3ΔG is not shown: homology to its MGnify fine-tune confounds the comparison.
Overall = NDCG@96 of a library with its singles and doubles ranked together (singles are 73% of the rows); it differs from the singles bar by -0.03 to -0.01.
