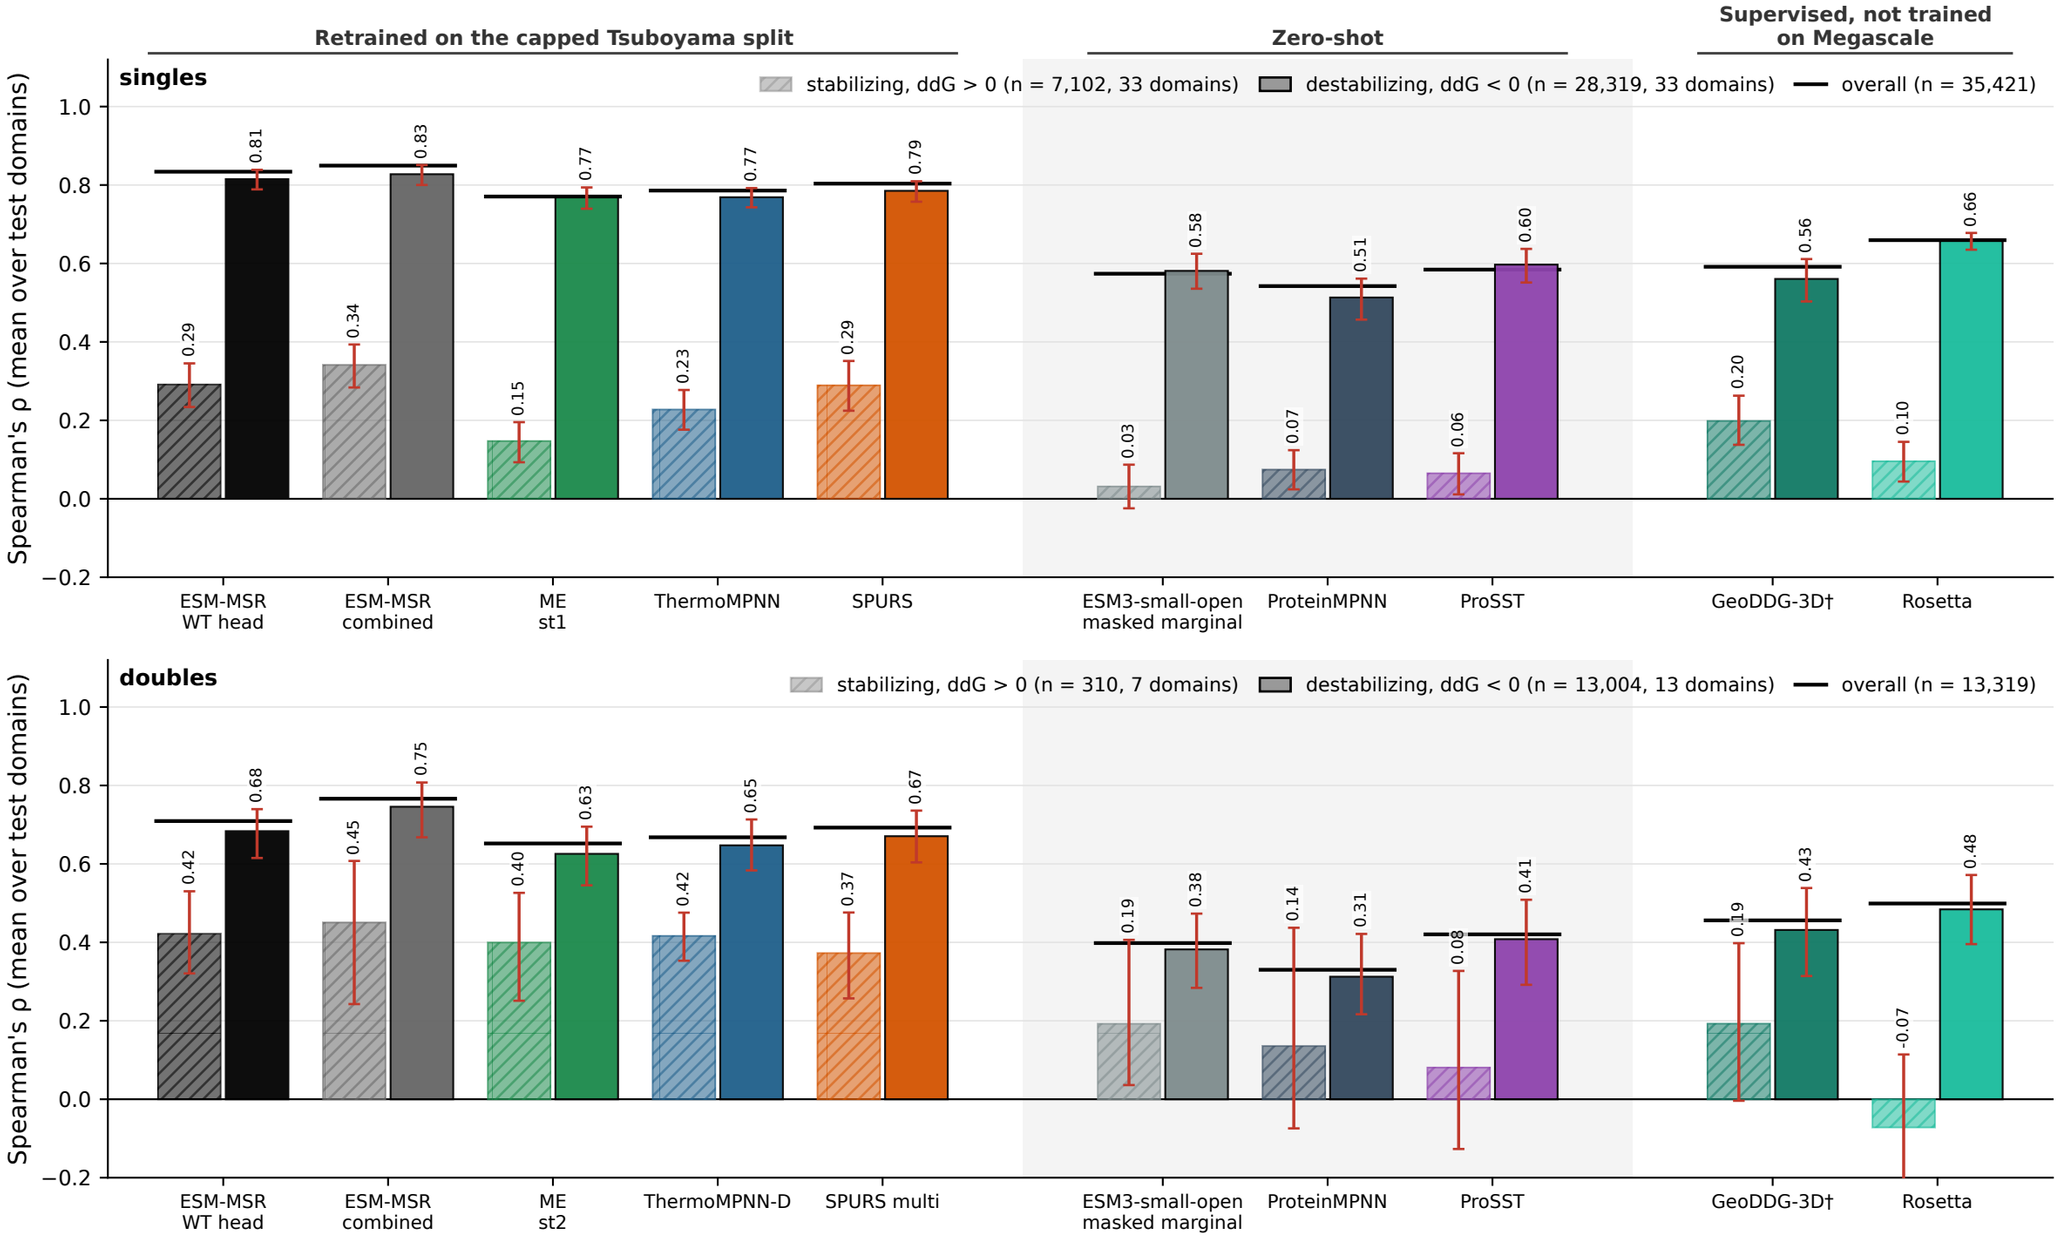
Capped Tsuboyama test, Spearman ρ of stabilizing against destabilizing variants (domains with at least 10 in the subset); each panel scores its subset with the model that fits it; 95% intervals from resampling domains



† trained on S8754 (ProThermDB + ThermoMutDB), not on Megascale; chosen over DDGemb by mean per-library singles ρ. ESM3ΔG is not shown: homology to its MGnify fine-tune confounds the comparison.
