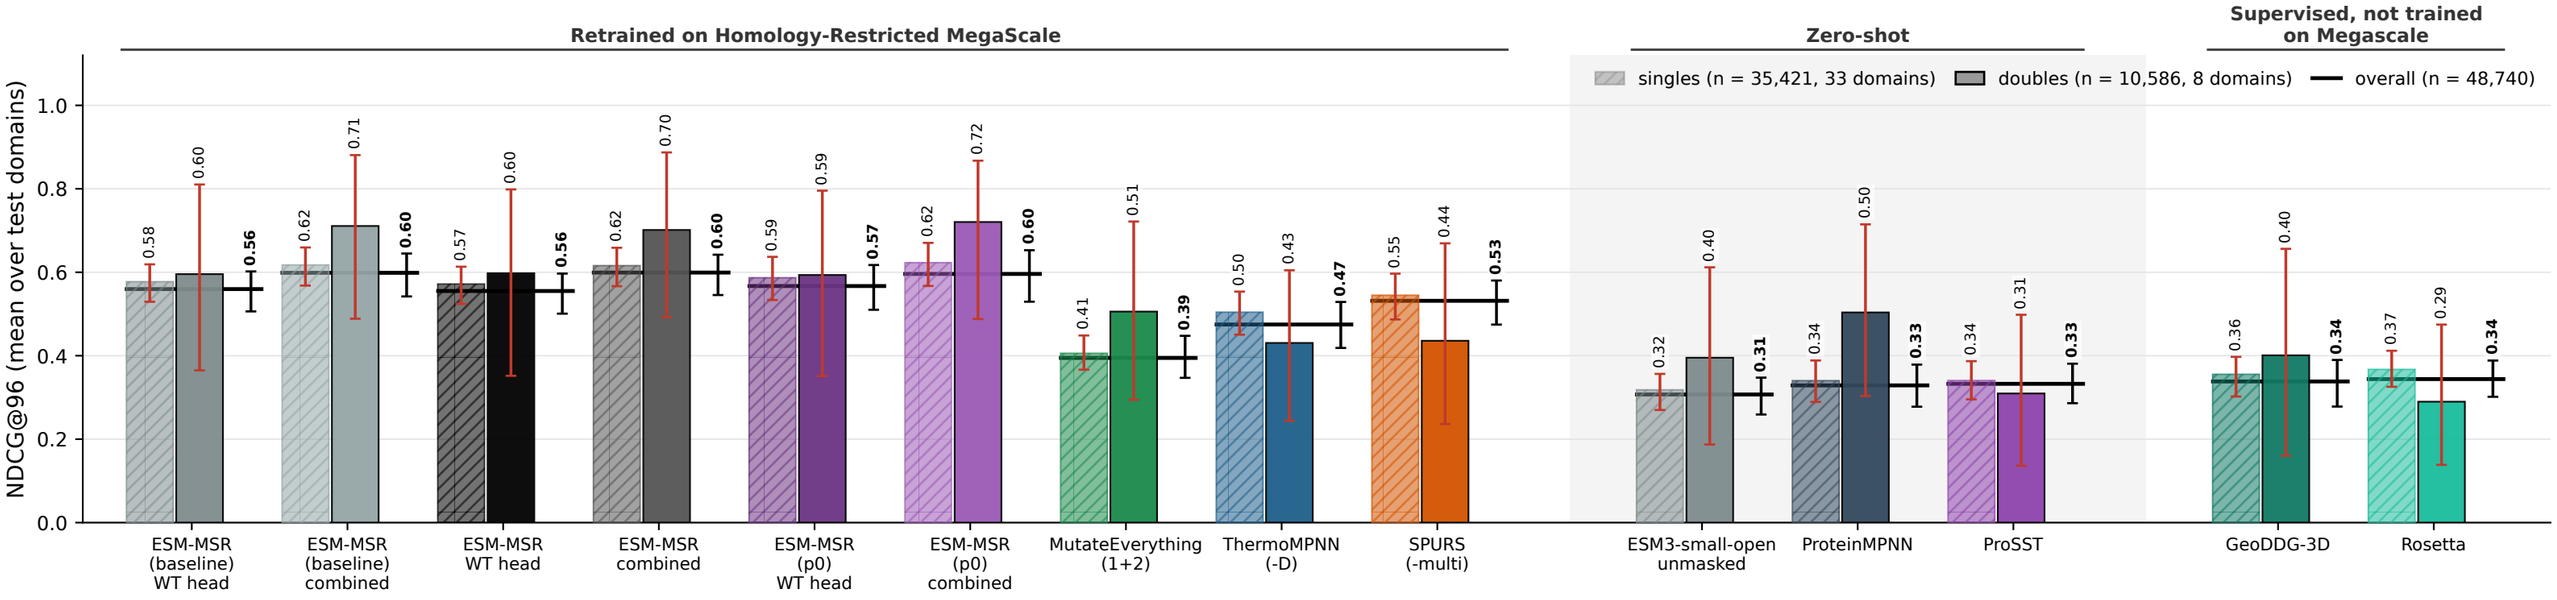
Homology-Restricted MegaScale test, NDCG@96 per library, 95% intervals from resampling domains (doubles: the domains with a stabilizing double)



MutateEverything(1+2), ThermoMPNN(-D), SPURS(-multi): singles are scored by the first model, doubles by the second (stage 1 / stage 2, ThermoMPNN / ThermoMPNN-D, SPURS / SPURS multi).
Overall = NDCG@96 of a library with its singles and doubles ranked together (singles are 73% of the rows); it differs from the singles bar by -0.03 to -0.01.
