
Homology-Restricted MegaScale test doubles with both singles measured (n = 12,455): measured epistasis over the plane of the two singles, by additive dG
dG additive > 1 (n = 3,907)
0 < dG additive ≤ 1: close to the floor (n = 3,498)
dG additive ≤ 0: saturation-dominated (n = 5,050)
ΔΔG_B: the other single (kcal/mol)
ΔΔG_A: the more destabilizing single (kcal/mol)
measured dddG (kcal/mol); blue positive, red negative
