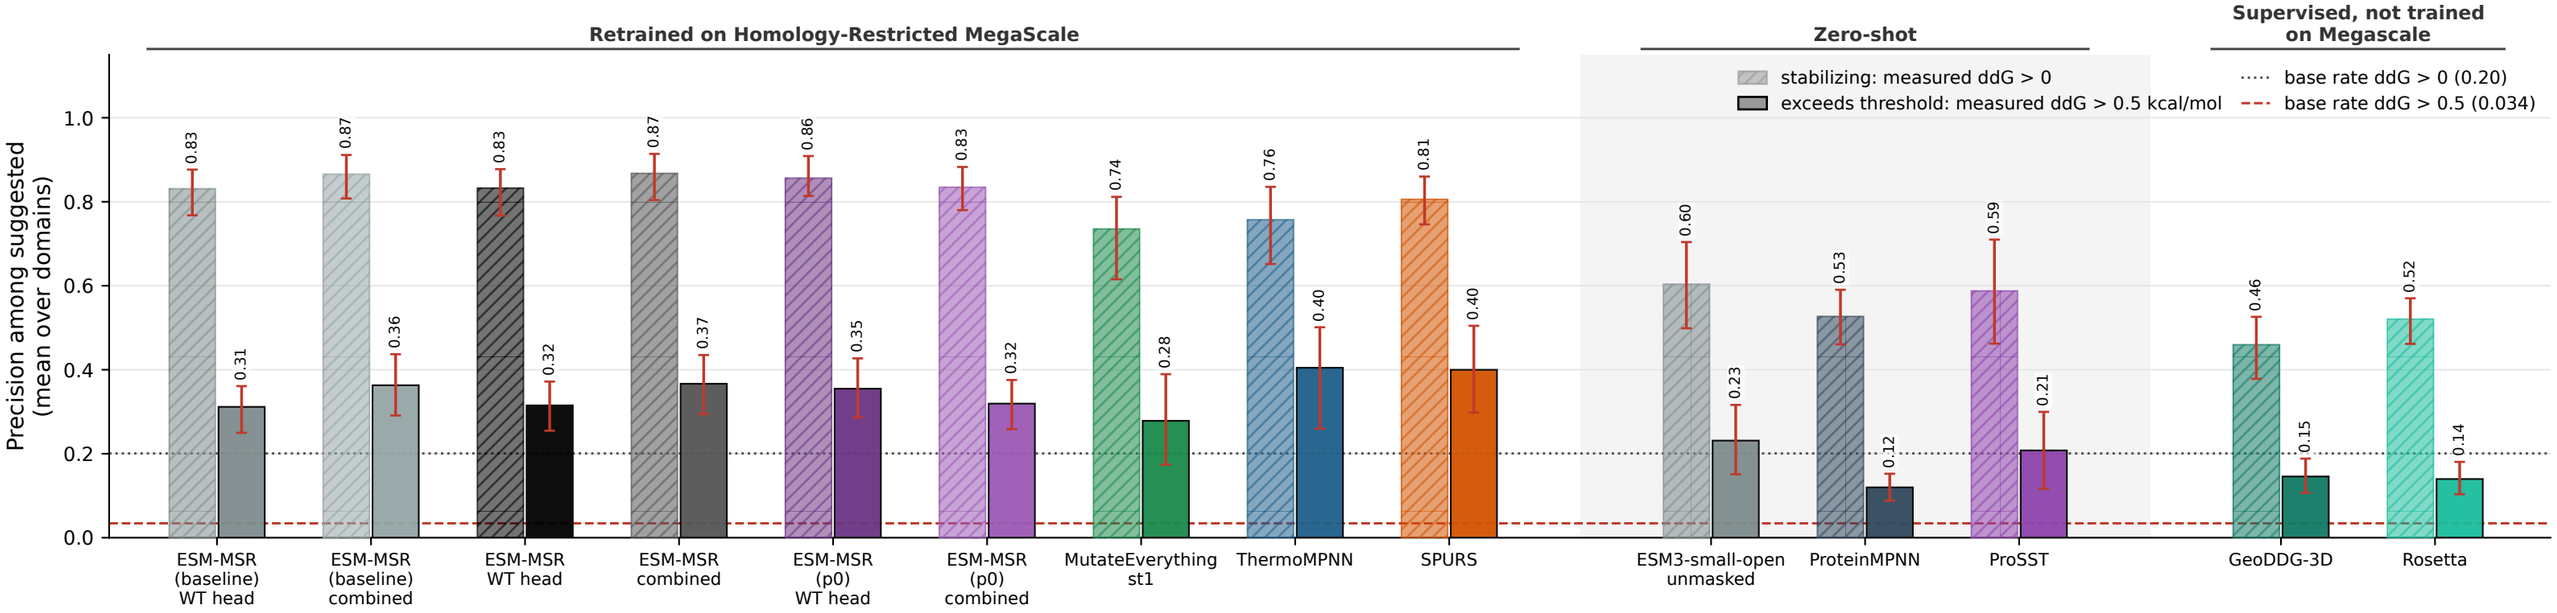
Homology-Restricted MegaScale test, single mutants: fraction of suggested variants (predicted > 0.5 kcal/mol) exceeding threshold (mean over domains with ≥ 1 suggested variant); 95% intervals from resampling domains



Suggested = single mutants with predicted ddG > 0.5 kcal/mol (n = 35,421 across 33 test domains; 1,277 have measured ddG > 0.5 kcal/mol in 32 domains, 7,102 have ddG > 0 in 33 domains).
