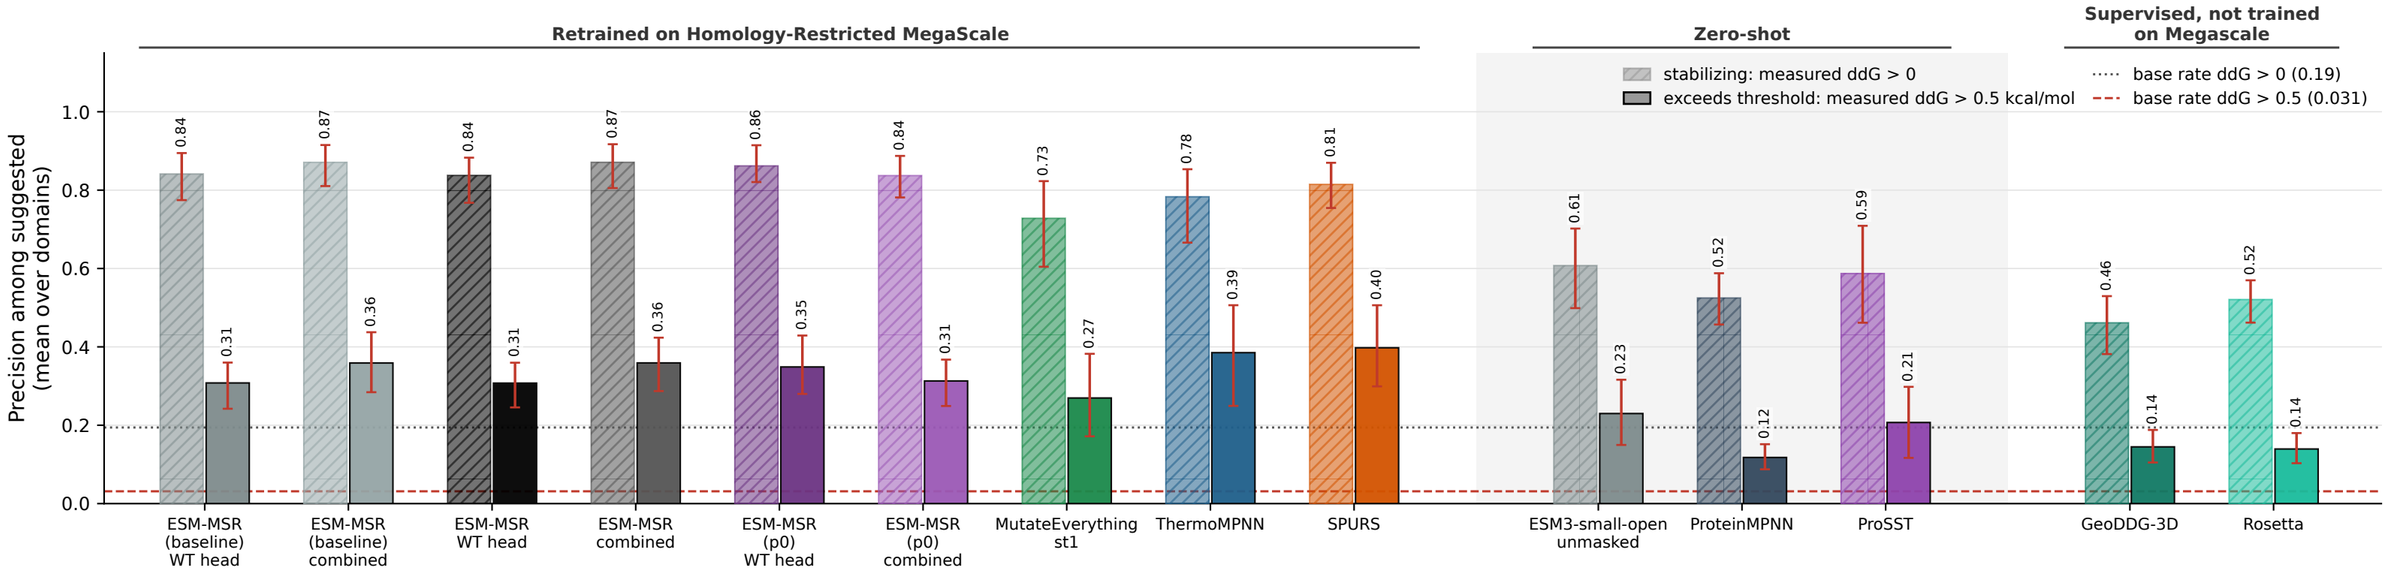
Homology-Restricted MegaScale test, single mutants (excluding mutations to Cys): fraction of suggested variants (predicted > 0.5 kcal/mol) exceeding threshold (mean over domains with ≥ 1 suggested variant); 95% intervals from resampling domains



Suggested = single mutants (excluding mutations to Cys) with predicted ddG > 0.5 kcal/mol (n = 33,854 across 33 test domains; 1,122 have measured ddG > 0.5 kcal/mol in 32 domains, 6,568 have ddG > 0 in 33 domains).
