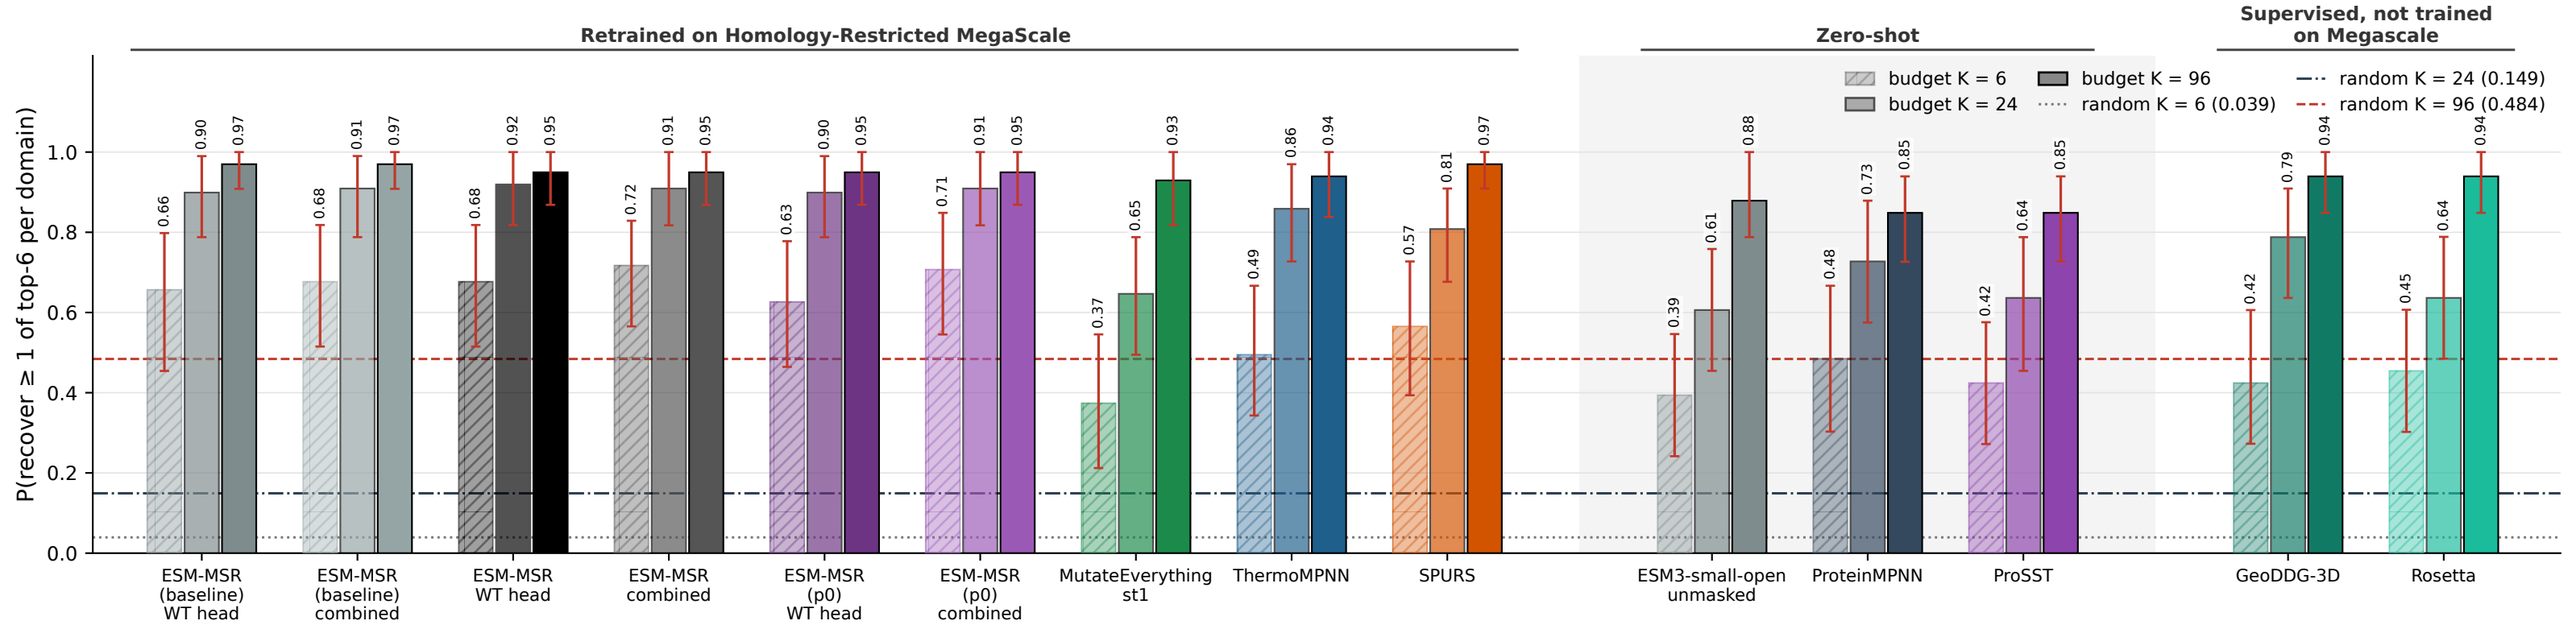
Homology-Restricted MegaScale test, single mutants (excluding mutations to Cys): probability of recovering at least one of the top-6 most stabilizing mutants per protein (budgets K = 6, 24, 96); 95% intervals from resampling domains



Top-6 most stabilizing single mutants (excluding mutations to Cys) per domain across the 33 test domains (6th-best ddG per domain averages +0.87 kcal/mol, min +0.15 kcal/mol).
